LOGICALIS Architects of Change | ## Microsoft

A **three-step** guide to AI automation in business

Productivity, process and **scale** with Microsoft's AI ecosystem

The challenge

Organisations are under intense pressure to **unlock value from AI quickly, securely, and at scale.** While tools like Microsoft 365 Copilot promise immediate productivity gains, many businesses struggle to move beyond experimentation into meaningful, governed adoption. Common challenges include:

▸ **Unclear AI strategy and fragmented intiatives**

▸ **Low user adoption and inconsistent outcomes from Copilot**

▸ **Data readiness, security, and compliance concerns**

▸ **Difficulty scaling from "AI assistants" to advanced, custom AI solutions**

▸ **Lack of skills and operational models to manage AI long term**

Without a clear roadmap, organisations risk stalled AI investments, shadow IT, and missed opportunities for differentiation.

Solution overview

Copilot 365 adoption and enablement

▸ Readiness assessments covering identity, security, and data posture

▸ Use-case prioritisation aligned to business roles and outcomes

▸ Structured adoption and change management programs

▸ Governance, compliance, and responsible AI controls

▸ Ongoing optimisation and value tracking

Scaling to advanced AI with Microsoft Foundry

▸ Readiness assessments covering identity, security, and data posture

▸ Use-case prioritisation aligned to business roles and outcomes

▸ Structured adoption and change management programs

▸ Governance, compliance, and responsible AI controls

▸ Ongoing optimisation and value tracking

Partner for success!

Work with **our team of experts** to design and execute an AI roadmap designed to fit the needs of your business.

Align with security and compliance, make sure every AI solution fits your organisation's standards and requirements.
